Sungjun Lee

Vancouver, BC | 778-926-8205 | anderpuding0917@gmail.com | GitHub | Portfolio

Education

University of British Columbia *Expected November 2027*
Bachelor of Science, Combined Major in Computer Science and Mathematics Vancouver, BC
Coursework: Data Structures and Algorithms, Software Construction, Probability, Optimization, Linear Algebra

Experience

Software Engineer Intern – AI/ML *Apr. 2026–Aug. 2026*
Product Manager Accelerator Remote

Project: Remember – AI-Powered Memorial Platform
Next.js, Express, Supabase, PostgreSQL, OpenAI API, Vercel, Render

- Delivered a **full-stack memorial MVP to 35+ testers**, owned the contributor workflow on a team of five developers and two data scientists.
- Connected frontend workflows to **17 backend API endpoints** across authentication, memorial management, and contributor submissions.
- Preserved transcription timestamps through AI generation and documented a **shared seconds-based format** to resolve a dependency with audio playback.
- Synchronized transcript highlighting and scrolling with playback in organizer and shared memorial views; added **regression tests** for seeking and missing timestamps.

Project: WonderWordAI – AI Reading Coach Platform

- Built a **full-stack reading-coach MVP in four weeks**, owning the Next.js web shell, Supabase Auth, PostgreSQL schema, Row Level Security (RLS) policies, and Vercel deployment setup.
- Implemented **20 Next.js API routes** supporting worksheet capture, OCR forwarding, audio submission, parent reports, story narration, phonics lookup, and practice recommendations.
- Added **Playwright end-to-end tests**, database migrations, and pgTAP tests for authentication, RLS, session access, and known-word refresh behavior; made test and typecheck workflows deterministic.

Research Assistant – Planning for Climate Equity *Aug. 2024–Jan. 2025*
PLACE Lab, University of British Columbia Vancouver, BC

- Built reusable **R workflows with dplyr, ggplot2, and Plotly** to clean, join, model, and visualize climate and demographic data.
- Visualized differences between Pennsylvania residents' energy-project preferences and local officials' perceptions, helping researchers identify underestimated solar support and the importance of job creation.

Technical Projects

Nodii – Cross-Platform Task and Routine Management App *Sept. 2026–Present*
TypeScript, React, React Native, Expo, Tauri, Supabase, PostgreSQL, TanStack Query

- Built **macOS and iOS applications with shared TypeScript domain and API packages**, supporting email OTP authentication, goal management, recurring tasks, and interactive calendars.
- Implemented **real-time synchronization and optimistic updates** with Supabase and TanStack Query, including failure rollback and timestamp-based conflict resolution across overlapping calendar caches.
- Developed a **recurrence engine** handling daily, weekly, and monthly schedules, leap years, and month-end edge cases without pre-generating task records; secured data access with PostgreSQL RLS and transactional RPCs.
- Established **GitHub Actions CI with 560+ unit and component tests**, additional pgTAP database tests, and **over 99% core statement coverage**.

Vanori – AI-Powered Local Discovery iOS Application *May 2026–Jun. 2026*
Swift, SwiftUI, Supabase, PostgreSQL, Edge Functions, Gemini

- Shipped a **SwiftUI TestFlight MVP with 100 curated places, events, and activities**, including authentication, onboarding, discovery, saved items, reviews, notifications, and profiles.
- Designed a **hybrid recommendation pipeline** that scores content across seven weighted factors, selects 20 candidates, and uses Gemini 2.5 Flash-Lite to rerank the top five with user-facing reasons.
- Restricted Gemini recommendations to **validated candidate items**; built the backend with PostgreSQL, RLS, Supabase Storage, and Edge Functions.

Technical Skills

Languages: Python, R, TypeScript, JavaScript, SQL, Swift, Java
Application Development: Next.js, React, Node.js, Express, SwiftUI, Supabase, PostgreSQL, REST APIs
Testing and Tools: Playwright, pgTAP, Git, Linux, Docker
AI and Data: OpenAI API, Gemini API, dplyr, ggplot2, Plotly
